DIGIT RESOURCE MANAGEMENT RECEIVE EXCELLENT FEEDBACK FROM THAMES WATER

Digit Resource Management has received excellent feedback from long standing customer Thames Water for an ongoing recycling of untreated sewage sludge project.

Digit Resource Management has been on hand to provide an “emergency response service” to Thames Water for approximately five years, and has been a customer for over 10 years. Thames Water contacts Digit Resource Management should any issues arise in relation to sewage sludge at any of their sites, to help ensure that there is no disruption to the ongoing provision of sewage treatment works.

Both companies also work closely together to influence stakeholders such as Environmental Agency and Water UK to remain compliant and ensure that the most effective solution for the water industry is in place.

Tom Penny, Support Services Manager, Thames Water Bio-Recycling commented; “Overall we are very happy with the service provided by Digit. Communication is always good and the whole team knows what is going on with the various operations not just the main contact. Digit do not just provide a service, they analyse the situation and offer solutions, considering a number of options some of which we may not have considered. Digit are easy to work with and always willing to go the extra mile to support us.”

Ralph Lodge, Technical Director, Digit Resource Management said; “This illustrates the good working relationship that has been built up with Thames Water over a number of years. Digit Resource Management has gained a reputation for always providing practical, deliverable solutions however difficult a situation.”

Graeme McDonald
Managing Director, Digit Resource Management Limited
